EXECUTIVE PROFILE

Principal-level Cloud Architect and FinOps consultant with 10+ years designing, automating, and optimizing enterprise-scale multi-cloud platforms across Google Cloud, AWS, and Azure. Proven record delivering reliable, observable, and cost-efficient infrastructure for banks, airlines, and global enterprises in regulated environments. Founder of UP2CLOUD, delivering end-to-end cloud architecture, DevOps, FinOps, and data engineering to international B2B clients — removing ~30% of cloud waste through automation while strengthening security, compliance, and delivery.

SELECTED IMPACT HIGHLIGHTS

- **~30% cloud waste eliminated** across a multi-account, multi-cloud estate (GCP / AWS / Azure) via FinOps automation in Python against billing APIs and CloudHealth, with automated tagging and chargeback feeding executive dashboards.
- **~10x analytics throughput** delivered on a Google Cloud Big Data platform using Apache Beam on Dataflow, App Engine, and BigQuery, unlocking self-serve real-time analytics.
- **99.9% availability** for regulated banking and aviation workloads across GCP / AWS / Azure / OCI, with 24/7 observability and audit-ready compliance.
- **40+ cloud projects** delivered across 6+ countries and 4 cloud providers for banking, aviation, media, staffing, and automotive clients.

CORE SKILLS & TECHNOLOGY STACK

Cloud Platforms Google Cloud (GCP), AWS, Microsoft Azure, Oracle Cloud (OCI), multi-cloud & hybrid architecture

Platform Engineering Kubernetes (GKE / EKS / AKS), Docker, Helm, Argo CD, Istio, Anthos, GitOps, internal developer platforms

IaC & Automation Terraform, Terragrunt, Ansible, Puppet, Chef, Python, Bash

CI/CD & Delivery GitHub Actions, GitLab CI, Jenkins, CloudBees, Codefresh, Cloud Build, Spinnaker, ArgoCD

FinOps & Cost Optimization CloudHealth, Cloud Billing APIs, BigQuery cost analytics, rightsizing, tagging & chargeback, budgeting & forecasting

Observability & Reliability Prometheus, Grafana, Loki, Tempo, OpenTelemetry, New Relic, Datadog, Splunk, PagerDuty, StackStorm, SLO/SLI

Security & Governance IAM, HashiCorp Vault, Policy-as-Code, OPA, Checkov, least-privilege, compliance, PII / data protection

Data Engineering BigQuery, Apache Beam, Dataflow, dbt, Dataform, Apache Kafka, ETL pipelines

Languages Python, Java, Kotlin, Node.js, SQL

PROFESSIONAL EXPERIENCE

UP2CLOUD Remote · Europe / Worldwide

Jan 2022 – Present

Founder · Principal Cloud & FinOps Consultant

- Founded an independent B2B consultancy delivering end-to-end cloud architecture, DevOps, FinOps, and data engineering; embed with client teams to modernize platforms and harden delivery across Europe and the Americas.
- Architect and automate multi-cloud platforms on GCP, AWS, and Azure using Terraform and GitOps, standardizing provisioning and improving reliability and scalability for regulated workloads.
- Build Python automation against multi-cloud billing APIs and BigQuery to productize FinOps reporting, auto-tagging, and chargeback, giving clients per-team cost accountability.
- Design secure CI/CD and release pipelines (GitHub Actions, GitLab CI, CloudBees) integrating policy-as-code and centralized secrets management for repeatable, auditable deployments.

Randstad Digital Portugal Remote

Feb 2022 – Aug 2025

Senior Cloud / FinOps Automation Engineer

- **Cut ~30% of cloud waste** across a multi-account, multi-cloud estate (GCP / AWS / Azure) by building Python automation against billing APIs, CloudHealth ingestion, and scheduled cost-reporting and auto-tagging jobs feeding executive dashboards.
- Delivered automated chargeback and a unified tagging taxonomy across 12 platform teams, replacing fragmented, untagged spend with real-time, per-team cost accountability.

- Operated CI/CD pipelines on CloudBees and Codefresh, integrating container workflows, Python automation, and AWS services for reliable delivery.
- Implemented HashiCorp Vault for centralized secrets management across pipelines and cloud workloads, securing credentials, tokens, and API keys; automated observability with New Relic and Grafana and built cloud health-check automation.
- Led FinOps capacity planning, disaster-recovery testing, and cloud security and architecture audits, improving cost efficiency, resilience, and governance posture.

ZeroLight *Remote (UK)*

Aug 2021 – Feb 2022

Senior DevOps Engineer

- Delivered resilient multi-cloud delivery for automotive visualization platforms, supporting deployments, releases, and production operations across time zones with rollback readiness and minimal downtime.
- Built and maintained Terraform IaC for repeatable, compliant, scalable environments; contributed platform automation in Python, Java, and Kotlin.

Accenture Interactive *São Paulo, Brazil*

Aug 2020 – Aug 2021

Technology Architecture Manager

- Led a cloud enablement team running GKE in production on Google Cloud, with delivery automation via Jenkins and Spinnaker and infrastructure as code via Terraform and Ansible.
- Owned technical delivery and pre-sales architecture for prospective cloud clients across Java, Kotlin, Python, and Node.js stacks.

everis (NTT Data) *São Paulo, Brazil*

Feb 2019 – Aug 2020

Cloud Architect

- **Architected secure, observable multi-cloud (GCP / AWS / Azure / OCI) at 99.9% availability** for regulated banking and aviation clients — AndBank, Santander, and LATAM Airlines.
- Designed VPC networking and PII / sensitive-data controls; built 24/7 observability with New Relic, PagerDuty, and StackStorm, and migrated AndBank workloads to Google Cloud and Oracle Database on AWS.

CI&T *Campinas, Brazil*

Dec 2017 – Feb 2019

Software / Cloud Engineer

- **Built a real-time Big Data analytics platform on Google Cloud (~10x throughput)** using Apache Beam on Dataflow, App Engine, and BigQuery (Java / Node.js / React), enabling self-serve analytics over massive event streams.
- Migrated AB InBev Mexico e-commerce to Azure with Azure DevOps pipelines; earned first Google Cloud Professional Cloud Architect certification.

Earlier Experience *Brazil & USA*

2011 – 2017

Indra Brasil — Software Engineer (2017): smart-grid platforms with Java EE, Apache Kafka, and Node.js.

Eldorado Research Institute — Software Analyst (2014–2017): Android and Python backends (RabbitMQ, Node.js, GCM) for Motorola US/BR.

IBM (Lenexa, KS, USA) — Software Engineer Intern (2014): re-architected the Open Admin Tool from PHP to a Java MVC system.

CPqD — Java Developer (2011–2013): Java EE billing and utility web platforms.

CERTIFICATIONS

Google Cloud — Professional Cloud Architect (2x certified) · Associate Cloud Engineer

AWS — Cloud Practitioner · Microsoft Azure Fundamentals (AZ-900) · FinOps Practitioner

New Relic Performance Pro · DevOps Essentials (CertiProf) · Agile / Kanban

EDUCATION

Computer Engineering — UNIVESP, Universidade Virtual do Estado de São Paulo

2018 – 2024

Computer Information Systems — UFSCar, Universidade Federal de São Carlos

2012 – 2018

Exchange — Computer Science / Engineering — University of Missouri–Kansas City (Brazil Scientific Mobility)

2014

Computer Technician, Software Development — COTUCA / UNICAMP

2009
